Subj: Verification Sampling Results
JP5 Pipelines near Building 658 (Former Jet Engine Test Facility)
Former Marine Corps Air Station, El Toro

Soil samples were collected at five (5) locations adjacent to and near Building 658 in the northeastern section of the Former Marine Corps Air Station, El Toro during October and November 2004. Results of the sampling activities are presented with this transmittal.

The rationale for the sampling locations was provided in our strategy document dated 12 October 2004. The RWQCB indicated that they had no comments in their letter dated 23 November 2004.

Petroleum hydrocarbons and volatile organic compounds were not detected at or above reporting limits in the borings located adjacent to the southeastern, southwestern, and northwestern sides of Building 658 and adjacent to the storm drain inlet located south of Building 658. Petroleum hydrocarbons and volatile organic compounds were detected adjacent to the abandoned sump located adjacent to the northeastern side of Building 658. The northeastern side of Building 658 will be further evaluated.

Please do not hesitate to contact me at (619) 532-0783 if you have questions pertaining to this transmittal. A formal transmittal letter may follow.
